1. Write a jQuery program to get a single element from a selection of elements of a HTML page.
2. You are having sample data for the link. Write jQuery code to change the hyperlink and the text of an existing link.
3. Write a jQuery program to attach a click and double-click events to all elements.
4. Write a jQuery program to hide all headings on a page when they are clicked. Also find the position of the mouse pointer relative to the left and top edges of the document
5. Create a JSON object, array, and file to store a cricket match (or any team sport) scoreboard.
6. Design and implement a web page that displays a live scoreboard. Use AJAX (XMLHttpRequest) to retrieve and interpret JSON data from a URL provided by the faculty.
7. Design and implement a web page that displays live news headlines. Use the Axios HTTP client to retrieve and interpret JSON data from a URL provided by the faculty.
8. Write a Node program that prints all the numbers between 1 and 100, each on a separate line. A few caveats:
9. Write a program to create a new file and write some content to it in synchronous mode and read and display file contents on standard output in async mode
10. Build a simple Node.js web application serving both HTTP GET and POST methods
11. Use Node and Express to write a simple web application that consists of at least 5 route implementations
12. Rebuild any previous Node assignment using Express and a template engine
13. Update the design of the Resume for using Bootstrap
14. Rebuild any previous plain HTML lab assignment using React
15. Build a React Clock app showing time (hh:mm:ss) of any three countries
16. Implement the following items in the React Clock app Update the time(hh:mm:ss) using State and Lifecycle methods Add a close function non each rendered clock component Assign background color of rendered clock components based on AM, PM Implement and integrate a new feature in the React Clock app where one can select. country time zone from dropdown list and click on “Add” button to render it.
17. Make necessary changes in the design and implementation of React Clock app using React Redux to maintain the application state.
